APPLICABLE CODES AND EDITIONS:

ALL WORK SHALL COMPLY WITH THE 2006 INTERNATIONAL BUILDING CODE, 2010 CALIFORNIA BUILDING CODE, 2010 CALIFORNIA ENERGY CODE, 2010 CALIFORNIA PLUMBING CODE, 2010 CALIFORNIA MECHANICAL CODE, 2010 CALIFORNIA ELECTRICAL CODE, 2010 CALIFORNIA ADMINISTRATIVE CODE, CALIFORNIA FIRE CODE AND ALL APPLICABLE STATE, COUNTY, AND LOCAL CODES AND STANDARDS.

Scope of Work and General Notes

1. The project's base bid involves site development & construction of building "D", as indicated on architectural, civil, plumbing, mechanical, electrical, landscape drawings.
2. Contractor and sub-contractors shall visit the site prior to bidding and shall verify all job site conditions and dimensions and report to the engineer-of-record of any discrepancies.
3. Contractor to provide emergency telephone on the job site.
4. The facilities will remain open during construction. It is the contractor's responsibility to coordinate with the staff of the temple on a daily basis to assure the continuity of operations and to minimize disruption of the temple activities.
5. Fire Department truck access shall be properly maintained and in service prior to, during and after construction.
6. Contractor and sub-contractors shall include in their bid daily site clean-up as part of their work for modifications to the existing, as well as for new construction areas. The contractors and sub-conractors shall exercise strict control over job cleaning in order to prevent any dirt, debris or dust from affecting, in anyway the finished or existing areas in or outside the jobsite, the local codes and neighbors' concerns shall apply.
7. Noise construction activities which occur outdoors shall take place on weekdays between hours 7:30a.m. to 5 p.m. and noisy construction equipment shall be operated between hours 9 a.m. to 4 p.m. Local requirements or neighbors' requests may change these operations. In all cases city ordinance shall be followed.
8. These construction bid documents are for general purposes only. They are not exhaustively detailed or fully specified. It is the responsibility of the contractor to verify and resolve any questions with the engineer of record. It is the also the responsibility of the contractor to install all materials and equipment. The contractor is solely responsible for quality control and construction standards for this project. The drawings will indicate the existing items, the items that are to be demolished, the items that are to be refurbished and the items that are to remain. In all cases city ordinance shall be strictly adhered to.
9. Contractor(s) shall be held responsible for the results of any errors, discrepancies, or omissions in the contract documents.
10. The owner (Hindu Cultural Community Center) will not be responsible for any unauthorized changes to or uses of the plans and specifications. All changes must be in writing and must be issued by the engineer-of-record who is the owner's representative.
11. Any discrepancies shall be brought to the attention of engineer-of-record immediately prior to construction and resolved.
12. Written dimensions take precedence. Do not scale drawings.
13. All dimensions to and from are to the face of stud, unless noted otherwise.
14. Where discrepancies between the soil report and project drawings occur, contact the engineer-of-record.
15. Pad grade under buildings shall have positive slopes. Slopes shall be jute matted prior to landscaping to prevent soil erosion.
16. The following items shall be provided to the Building Inspector after verification by the registered professional engineer in the form of a stamped and signed professional report and submitted at the time of inspection.
    a. A surveyor must verify building setbacks to property lines and also pad elevation(s) before the time of the foundation inspection.
    b. When fill is employed under the buildings, a soils engineer must verify the pad compaction before the foundation inspection.
    c. A surveyor must verify finish floor elevations before shear walls and roof inspection.
    d. A surveyor must verify the highest elevation of the highest point of the roof before the frame inspection.
    e. For other inspection requirements see civil, structural, mechanical, plumbing, electrical and landscape drawings.
17. See civil drawings for existing and proposed grading, utilities, additional structures, proposed drainage and erosion control measures.
18. See landscape drawings for landscape features.
19. In the event of conflicts between pertinent codes and specifications and the drawings, the most stringent requirements shall apply.
20. Water and/or dust palliatives shall be applied during construction.
21. Contractor shall reimburse Hindu Cultural Community Center (HCCC) for all utility bills used for construction.
22. All dimensions noted "verify" are to be checked by the contractor prior to construction and report any variances to the engineer-of-record.
23. The General Contractor or his representative shall be at site at all times during construction. The General Contractor or his representative is solely responsible for: (a) coordination of drawings with all trades and professionals and (b) continuous safety for all people and property at all times.
24. The Contractor shall defend, indemnify and hold the owner and the design professionals harmless from and any all liability, real or alleged, in connection with the project, including but not limited to attorney fees and costs. The Owner & design professionals shall be named as additional insureds on the contractor's liability insurance.
25. The Contractor shall carry a surety bond, the bond amount shall not be less that the total contract amount.
26. Contractor to furnish the owner with all warranties and warranty information.
27. Contractor shall prepare a construction schedule and shall submit it to the Owner. "Owner" is Hindu Community and Cultural Center, Livermore.
28. The Owner and the Contractor will enter into a contract which will specify various terms including a payment schedule along with a finishing schedule. Ten percent of each payment will be retained until the project is completed and will be paid to the Contractor after the Occupancy Permit from City and approval by the Owner.
29. The Contractor at all times shall keep an approved stamped wet-signed set of the construction documents on site for reference.
30. Always use the latest set of construction documents.

EXCEPTIONAL CONDITIONS COMPLIANCE CHECKLIST

The local enforcement agency should pay special attention to the items specified in this checklist. These items require special written justification and documentation, and special verification to be used with the performance approach. The local enforcement agency determines the adequacy of the justifications, and may reject a building or design that otherwise complies based on the adequacy of the special justification and documentation submitted.

The Zone Zone-5 has a North/East/South Display Perimeter Credit of 40 ft.
The HVAC System AC-D-2 includes Demand Control Ventilation per Standards Section 121.
The HVAC System AC-D-1 includes Demand Control Ventilation per Standards Section 121.
The Zone Zone-1 has a North/East/South Display Perimeter Credit of 40 ft.
The Zone Zone-1A has a North/East/South Display Perimeter Credit of 40 ft.
The HVAC System AC-D-3 includes Demand Control Ventilation per Standards Section 121.
The Zone Zone -3 has a North/East/South Display Perimeter Credit of 52 ft.
The HVAC System CU/ACC-D-1 includes Demand Control Ventilation per Standards Section 121.

The exceptional features listed in this performance approach application have specifically been reviewed. Adequate written justification and documentation for their use have been provided by the applicant.

EXCEPTIONAL CONDITIONS COMPLIANCE CHECKLIST

The local enforcement agency should pay special attention to the items specified in this checklist. These items require special written justification and documentation, and special verification to be used with the performance approach. The local enforcement agency determines the adequacy of the justifications, and may reject a building or design that otherwise complies based on the adequacy of the special justification and documentation submitted.

The HVAC System CU/ACC-D-3 includes Demand Control Ventilation per Standards Section 121.
The HVAC System CU/ACC-D-4 includes Demand Control Ventilation per Standards Section 121.
The HVAC System Trane YHC-072 includes an Economizer. This system has a cooling output < 75,000 Btuh or a supply cfm < 2500.
The Roof R-38 Roof Attic Reflectance = 0.30, Emittance = 0.75 shall be rated and labeled by the Cool Roof Rating Council in accordance with Section 10-1

The exceptional features listed in this performance approach application have specifically been reviewed. Adequate written justification and documentation for their use have been provided by the applicant.

☐ Low-sloped Metal building roofs in Climate Zone 3 and 5 are exempted, solar relectance and thermal emittance or SRI that have a U-factor of 0.048 or lower. See Opaque Surface Details roof assembly below, Column H of ENV-2C.	☐	☐	☐
☐ The roof area covered by building integrated photovoltaic panels and building integrated solar thermal panels are exempted. Solar reflectance and thermal emittance or SRI, see spreadsheet calculator at www.energy.ca.gov/title24/	☐	☐	☐
☐ Roof constructions that have thermal mass over the roof membrane with a weight of at least 25 lb/ft² are exempt from the Cool Roof criteria below.	☐	☐	☐
☐ High-rise residential buildings and hotels and motels with low-sloped roofs in Climate Zones 1 through 9, 12 and 16 are exempted from the low-sloped roofing criteria.	☐	☐	☐

1. If Fail then describe on this page of the Inspection Checklist Form and take appropriate action to correct. Verify building plans if necessary.

1. The CRRC Product ID Number can be obtained from the Cool Roof Rating Council's Rated Product Directory at www.coolroofs.org/products/search.php
2. Indicate the type of product is being used for the roof top, i.e. single-ply roof, asphalt roof, metal roof, etc.
3. If the Aged Reflectance is not available in the Cool Roof Rating Council's Rated Product Directory then use the Initial Reflectance value from the same directory and use the equation (0.2+0.7($\rho_{initial}$ – 0.2) to obtain a calculated aged value. Where ρ is the Initial Solar Reflectance from the Cool Roof Rating Council's Rated Product Directory.
4. Check box if the Aged Reflectance is a calculated value using the equation above.
5. The SRI value needs to be calculated from a spreadsheet calculator at http://www.energy.ca.gov/title24/
6. If Fail then describe on this page of the Inspection Checklist Form and take appropriate action to correct. Verify building plans if necessary.

To apply **Liquid Field Applied Coatings**, the coating must be applied across the entire roof surface and meet the dry mil thickness or coverage recommended by the coatings manufacturer and meet minimum performance requirements listed in §118(i)4. Select the applicable coating:

☐ Aluminum-Pigmented Asphalt Roof Coating ☐ Cement-Based Roof Coating ☐ Other ____________

Required Acceptance Tests

Designer:

This form is to be used by the designer and attached to the plans. Listed below is the acceptance test for Envelope Fenestrations system. The designer is required to check the acceptance tests and list all the fenestration products that require an acceptance test. If all the site-built fenestration of a certain type requires a test, list the different fenestration products and the number of systems. The NA7 Section in the Appendix of the Nonresidential Reference Appendices Manual describes the test. Since this form will be part of the plans, completion of this section will allow the responsible party to budget for the scope of work appropriately.

Enforcement Agency:

Systems Acceptance. Before Occupancy Permit is granted for a newly constructed building or space or whenever new fenestration is installed in the building or space shall be certified as meeting the Acceptance Requirements. The ENV-2A form is not considered a complete form and is not to be accepted by the enforcement agency unless the boxes are checked and/or filled and signed. In addition, a Certificate of Acceptance forms shall be submitted to the enforcement agency that certifies plans, specifications, installation certificates, and operating and maintenance information meet the requirements of §10-103(b) of Title 24 Part 6. The field inspector must receive the properly filled out and signed forms before the building can receive final occupancy. A copy of the ENV-2A for each different fenestration product line must be provided to the owner of the building for their records.

SPECIAL FEATURES INSPECTION CHECKLIST (See Page 2 of 4 of LTG-1C)

The local enforcement agency should pay special attention to the items specified in this checklist. These items require special written justification and documentation, and special verification. The local enforcement agency determines the adequacy of the justification, and may reject a building or design that otherwise complies based on the adequacy of the special justification and documentation submitted.

Required Acceptance Tests

Designer:

This form is to be used by the designer and attached to the plans. Listed below is the acceptance test for the Lighting system, **LTG-2A and LTG-3A**. The designer is required to check the acceptance tests and list all control devices serving the building or space shall be certified as meeting the Acceptance Requirements for Code Compliance. If all the lighting system or control of a certain type requires a test, list the different lighting and the number of systems. The NA7 Section in the Appendix of the Nonresidential Reference Appendices Manual describes the test. Since this form will be part of the plans, completion of this section will allow the responsible party to budget for the scope of work appropriately. **Forms can be grouped by type of Luminaire controlled.**

Enforcement Agency:

Systems Acceptance. Before Occupancy Permit is granted for a newly constructed building or space or when ever new lighting system with controls is installed in the building or space shall be certified as meeting the Acceptance Requirements.
The **LTG-2A and LTG-3A** forms are not considered complete forms and are not to be accepted by the enforcement agency unless the boxes are checked and/or filled and signed. In addition, a Certificate of Acceptance forms shall be submitted to the enforcement agency that certifies plans, specifications, installation certificates, and operating and maintenance information meet the requirements of §10-103(b) of Title 24 Part 6. The field inspector must receive the properly filled out and signed forms before the building can receive final occupancy. A copy of the **LTG-2A and LTG-3A** for each different lighting luminaire control(s) must be provided to the owner of the building for their records.

CERTIFICATE OF COMPLIANCE and FIELD INSPECTION ENERGY CHECKLIST (Part 3 of 4) MECH-1C

Project Name: *HCC Bldg. D* Date: *10/27/2011*

Required Acceptance Tests

Designer:
This form is to be used by the designer and attached to the plans. Listed below are all the acceptance tests for mechanical systems. The designer is required to check the applicable boxes by all acceptance tests that apply and listed all equipment that requires an acceptance test. If all equipment of a certain type requires a test, list the equipment description and the number of systems. The NA number designates the Section in the Appendix of the Nonresidential Reference Appendices Manual that describes the test. Since this form will be part of the plans, completion of this section will allow the responsible party to budget for the scope of work appropriately.

Building Departments:
Systems Acceptance: Before occupancy permit is granted for a newly constructed building or space, or a new space-conditioning system serving a building or space is operated for normal use, all control devices serving the building or space shall be certified as meeting the Acceptance Requirements for Code Compliance.
Systems Acceptance: Before occupancy permit is granted, All newly installed HVAC equipment must be tested using the Acceptance Requirements.

The MECH-1C form is not considered a completed form and is not to be accepted by the building department unless the correct boxes are checked. The equipment requiring testing, person performing the test (Example: HVAC installer, TAB contractor, controls contractor, PE in charge of project) and what Acceptance test must be conducted. The following checked-off forms are required for **ALL** newly installed equipment. In addition a Certificate of Acceptance forms shall be submitted to the building department that certifies plans, specifications, installation, certificates, and operating and maintenance information meet the requirements of §10-103(b) and Title-24 Part 6. The building inspector must receive the properly filled out and signed forms before the building can receive final occupancy.

ENVELOPE MANDATORY MEASURES: NONRESIDENTIAL ENV-MM

Project Name: HCC Bldg. D | Date: 10/27/2011

DESCRIPTION

Building Envelope Measures:

§118(a):	Installed insulating material shall have been certified by the manufacturer to comply with the California Quality Standards for insulating material, Title 20 Chapter 4, Article 3.
§118(c):	All Insulating Materials shall be installed in compliance with the flame spread rating and smoke density requirements of Sections 2602 and 707 of Title 24, Part 2.
§118(d):	The opaque portions of framed demising walls in nonresidential buildings shall have insulation with an installed R-value of no less than R-13 between framing members.
§117(a):	All Exterior Joints and openings in the building that are observable sources of air leakage shall be caulked, gasketed, weatherstripped or otherwise sealed.
§116(a) 1:	Manufactured fenestration products and exterior doors shall have air infiltration rates not exceeding 0.3 cfm/ft.² of window area, 0.3 cfm/ft.² of door area for residential doors, 0.3 cfm/ft.² of door area for nonresidential single doors (swinging and sliding), and 1.0 cfm/ft.² for nonresidential double doors (swinging).
§116(a) 2:	Fenestration U-factor shall be rated in accordance with NFRC 100, or the applicable default U-factor.
§116(a) 3:	Fenestration SHGC shall be rated in accordance with NFRC 200, or NFRC 100 for site-built fenestration, or the applicable default SHGC.
§116(b):	Site Constructed Doors, Windows and Skylights shall be caulked between the unit and the building, and shall be weatherstripped (except for unframed glass doors and fire doors).

LIGHTING MANDATORY MEASURES: NONRESIDENTIAL LTG-MM

Project Name: HCC Bldg. D | Date: 10/27/2011

Indoor Lighting Measures:

§131(d):	**Shut-off Controls**	
	1.	For every floor, all interior lighting systems shall be equipped with a separate automatic control to shut off the lighting. This automatic control shall meet the requirements of Section 119 and may be an occupancy sensor, automatic time switch, or other device capable of automatically shutting off the lighting.
	2.	Override for Building Lighting Shut-off. The automatic building shut-off system is provided with a manual, accessible override switch in sight of the lights. The area of override is not to exceed 5,000 square feet.
§119(h):		Automatic Control Devices Certified. All automatic control devices specified are certified, all alternate equipment shall be certified and installed as directed by the manufacturer.
§111:		Fluorescent Ballast and Luminaires Certified. All fluorescent fixtures specified for the project are certified and listed in the Directory. All installed fixtures shall be certified.
§131(a):		Individual Room/Area Controls: Each room and area in this building is equipped with a separate switch or occupancy sensor device for each area with floor-to-ceiling walls.
§131(b):		Uniform Reduction for Individual Rooms: All rooms and areas greater than 100 square feet and more than 0.8 watts per square foot of lighting load shall be controlled with bi-level switching for uniform reduction of lighting within the room.
§131(c):		Daylight Area Control: All rooms with windows and skylights that are greater than 250 square feet and that allow for the effective use of daylight in the area shall have 50% of the lamps in each daylit area controlled by a separate switch; or the effective use of daylight cannot be accomplished because the windows are continuously shaded by a building on the adjacent lot. Diagram of shading during different times of the year is included on plans.
§131(c):		Display Lighting. Display lighting shall be separately switched on circuits that are 20 amps or less.6.

Outdoor Lighting Measures:

§130(c)1:	Mandatory lighting power determination for medium base sockets without permanently installed ballasts.
§132(a):	All permanently installed luminaires with lamps rated over 100 Watts either have a lamp efficacy of at least 60 lumens per Watt or are controlled by a motion sensor.
§132(b):	All Luminaires with lamps rated greater than 175 Watts in hardscape area, including parking lots, building entrances, canopies, and all outdoor sales areas meet the Cutoff Requirements.
§132(c)1:	All permanently installed outdoor lighting meets the control requirements listed.
§132(c):	Building facades, parking lots, garages, canopies, and outdoor sales areas meet the Multi-Level Lighting Requirements listed.

MECHANICAL MANDATORY MEASURES: NONRESIDENTIAL MECH-MM

Project Name: HCC Bldg. D | Date: 10/27/2011

Equipment and System Efficiencies

§111:	Any appliance for which there is a California standard established in the Appliance Efficiency Regulations will comply with the applicable standard.
§115(a):	Fan type central furnaces shall not have a pilot light.
§123:	Piping, except that conveying fluids at temperatures between 60 and 105 degrees Fahrenheit, or within HVAC equipment, shall be insulated in accordance with Standards Section 123.
§124:	Air handling duct systems shall be installed and insulated in compliance with Sections 601, 602, 603, 604, and 605 of the CMC Standards.

Controls

§122(e):		Each space conditioning system shall be installed with one of the following:
	1A.	Each space conditioning system serving building types such as offices and manufacturing facilities (and all others not explicitly exempt from the requirements of Section 112 (d)) shall be installed with an automatic time switch with an accessible manual override that allows operation of the system during off-hours for up to 4 hours. The time switch shall be capable of programming different schedules for weekdays and weekends and have program backup capabilities that prevent the loss of the device's program and time setting for at least 10 hours if power is interrupted; or
	1B.	An occupancy sensor to control the operating period of the system; or
	1C.	A 4-hour timer that can be manually operated to control the operating period of the system.
	2.	Each space conditioning system shall be installed with controls that temporarily restart and temporarily operate the system as required to maintain a setback heating and/or a setup cooling thermostat setpoint.
§122(g):		Each space conditioning system serving multiple zones with a combined conditioned floor area more than 25,000 square feet shall be provided with isolation zones. Each zone: shall not exceed 25,000 square feet; shall be provided with isolation devices, such as valves or dampers that allow the supply of heating or cooling to be setback or shut off independently of other isolation areas; and shall be controlled by a time control device as described above.
§122(c):		Thermostats shall have numeric setpoints in degrees Fahrenheit (F) and adjustable setpoint stops accessible only to authorized personnel.
§122(b):		Heat pumps shall be installed with controls to prevent electric resistance supplementary heater operation when the heating load can be met by the heat pump alone
§122(a&b):		Each space conditioning system shall be controlled by an individual thermostat that responds to temperature within the zone. Where used to control heating, the control shall be adjustable down to 55 degrees F or lower. For cooling, the control shall be adjustable up to 85 degrees F or higher. Where used for both heating and cooling, the control shall be capable of providing a deadband of at least 5 degrees F within which the supply of heating and cooling is shut off or reduced to a minimum.

Ventilation

§121(e):	Controls shall be provided to allow outside air dampers or devices to be operated at the ventilation rates as specified on these plans.
§122(f):	All gravity ventilating systems shall be provided with automatic or readily accessible manually operated dampers in all openings to the outside, except for combustion air openings.
§121(f):	Ventilation System Acceptance. Before an occupancy permit is granted for a newly constructed building or space, or a new ventilating system serving a building or space is operated for normal use, all ventilation systems serving the building or space shall be certified as meeting the Acceptance Requirements for Code Compliance.

Service Water Heating Systems

§113(c)		Installation
	3.	Temperature controls for public lavatories. The controls shall limit the outlet Temperature to 110°F.
	2.	Circulating service water-heating systems shall have a control capable of automatically turning off the circulating pump when hot water is not required.
